

Lesson 3: HTML lists

Key notes to remember

1. Three main list elements in HTML are the unordered list ``, ordered list ``, and description list `<dl></dl>`.
2. The ordered and unordered list contain line items that are represented with the line item element ``
3. The description list contains two child elements which represent name `<dt></dt>` and values `<dd></dd>`
4. Each item in a description list shows a name and then a value or description of the name on the next line in the item.
5. The unordered list is by default displayed with a dot next to each item in the list.
6. The ordered list is by default displayed with a number next to each item in the list.
